

You can't fix what you can see.

Invisible threats: Fine particles, allergens, UV-B, carbon dioxide.

2023 Hawaii wildfires

Toronto choking on smoke

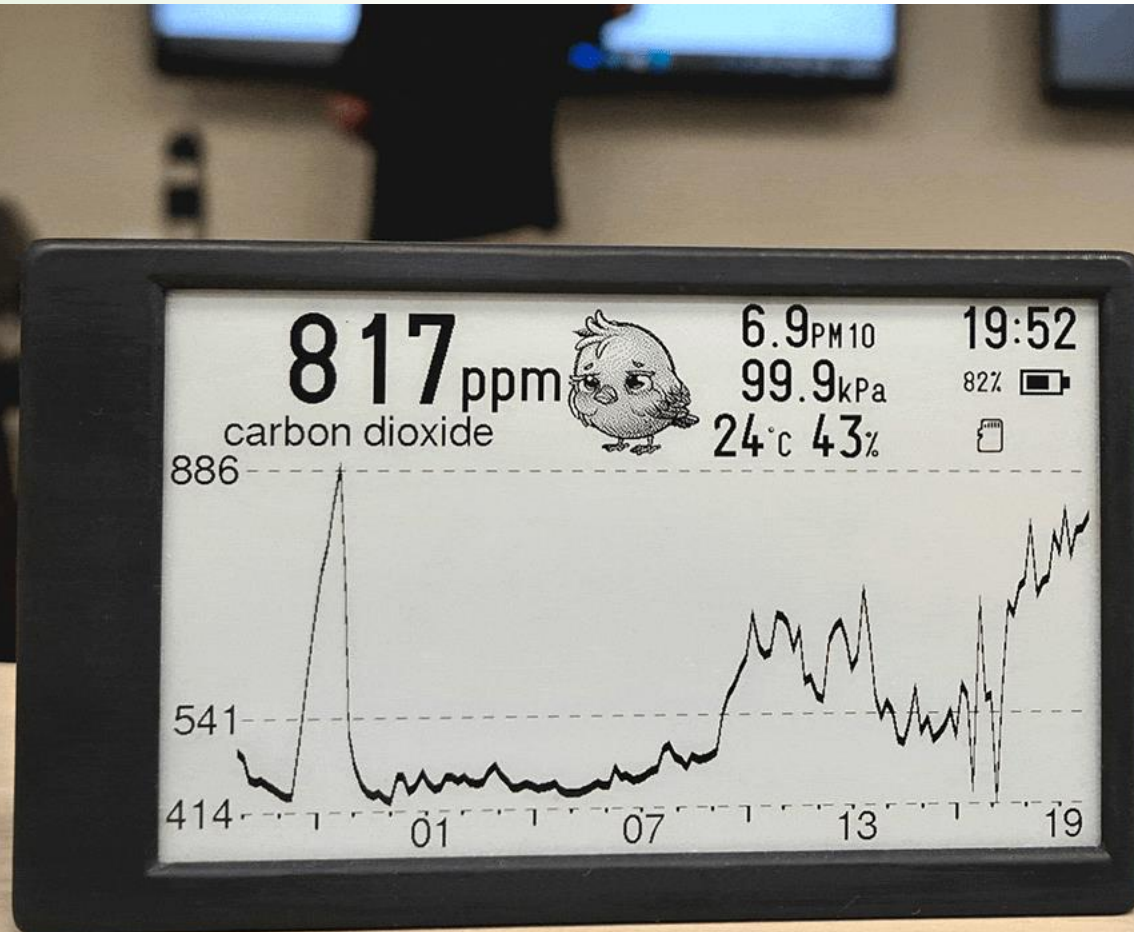

Competitors are compromised.

North America air quality sensor market: \$1.49B (2025) → \$3.0B (2031)

Meet Canary – your personal air detective!

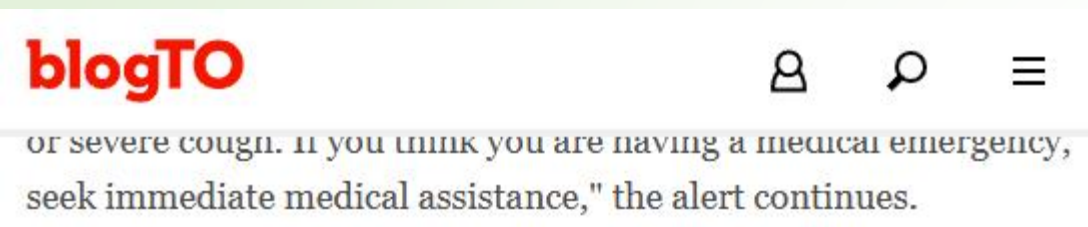

Seven lab-grade sensors: true UV-B, laser-acoustic CO₂, dual-laser particle counter, temperature, humidity, pressure, luminosity

Built by a finance guy who taught himself engineering.

Two contract engineers (M.Eng., M.Sci.) are finalizing design for manufacturing and assembly.

Momentum: Feedback form, organic Reddit/X traction, journalists mentions.

Help me put Canary in every pocket.

Ask: \$100,000 seed funding for preliminary FCC/ISED/CE certification, marketing and crowdfunding campaign, including promotional video, accelerated tooling and injection moulding design, working capital and contingencies
