

Business Idea: An elegant device, providing health-conscious individuals and organizations with instant alerts about invisible pollutants, so they can breathe easier.

Product / Service Idea: The world's first personal, pocketable, environmental wellness monitor, alarm and logger.

Key Partners

- Sensor manufacturers (Switzerland, Korea, Germany, China)
- Potential, full-service, contract manufacturer for production (SEED)
- Academic / research institutions (York University, Environment Canada) for data validation
- YEDI and ventureLAB for mentorship, lab access, and ecosystem connections
- Logistics / fulfillment partners (Shopify)

Key Activities

- Hardware design and prototyping (PCB, firmware, enclosure)
- Supply chain management and component sourcing
- Quality assurance and calibration
- Software development (firmware, mobile/web dashboard)
- Customer acquisition (digital marketing, content creation)
- Pursuing certifications (ISED, FCC)

Key Resources

- Founder: Cross-disciplinary expertise (engineering, finance, product design)
- Functional prototype (TRL 7) and associated IP (designs, firmware, trade secrets)
- Supplier relationships for key sensors, packaging, injection moulding
- Brand / website (<https://canary.earth>)
- Funding: Crowd-funding (Kickstarter, CrowdSupply), pre-orders

Value Propositions

- What we offer: A small, sophisticated air monitor that makes imperceptible threats evident in real time.
- Problems we solve: Fear of unknowingly harming health from CO₂, smoke, allergens; lack of actionable environmental data.
- Customer needs: Peace of mind, control over indoor/outdoor air quality, better sleep, focus, and safety.
- Differentiation: Seven lab-grade sensors in a pocketable device; unique features (Scanner Mode, Mask Test, UV-B); built to last (right to repair); no internet nor subscription required for core functions.

Customer Relationships

- Direct support: Personal assistance via email/chat for setup and troubleshooting
- Self-service: Website with tutorials, FAQs, demo data
- Community: User-generated content, social media engagement (Instagram, X)
- Co-creation: Beta tester feedback; user ideas for new features; NGO partnerships (GO AQS, Clean Air Toronto)

Channels

- Marketing:
- Content canvassing: Social media (Instagram, Reddit, X), blog, videos demonstrating real-world use
- Sales:
- Direct: Company website (e-commerce)
 - Enterprise: Direct sales to schools, offices, institutions
 - Partners: Potential retail or distributor relationships post-launch

Customer Segments

- Primary (B2C): Health-conscious urban and suburban professionals, parents, people with asthma and allergies, hypochondriacs (Canada, USA, Europe)
- Secondary (B2B): Enterprises (offices, schools) needing networked air quality monitoring (Gatineau's Government Services Union)
- Emerging (B2G): Government agencies / researchers interested in hyperlocal environmental data (Environment Canada, WorkSafeBC)

Cost Structure

- COGS: Components (PCB, enclosure, battery, assembly, tool and die, logistics, etc.) ~\$60 per unit at scale
- Monthly burn rate of ~\$4,000 (pre-sales):
- Marketing ~\$3000: Digital organic, IG Reels boost + Reddit + X ads (\$5-15/day each), 2-3 micro-influencers
 - Overhead ~\$1000: Legal, IP filings, basic tools (Canva, Altium, OnShape, Cursor)

Revenue Streams

- Main (95%):
- B2C hardware sales: One-time purchase of Canary device (target retail ~\$299 USD)
- Additional (%5):
- B2B subscriptions: Recurring fees for enterprise dashboard, alerts, and network management
 - Data licensing: Potential sale of anonymized, aggregated data to institutions or agencies
 - Accessories / replacement parts: Additional, minimal, revenue from right-to-repair components
